### **SPECIAL PROVISION: INCREASE THE MONTHLY PENSION FOR MEMBERS OF THE FIREMEN'S AND RESCUE SQUAD WORKERS' PENSION FUND**

**EFFECTIVE DATE:** July 1, 2006

**PROVISION SUMMARY:** Increases the monthly benefit to retirees and future retirees of the Firemen's and Rescue Squad Workers' Pension Fund from \$163 to \$165.

**ESTIMATED IMPACT ON STATE:**

Both the Fund's actuary, Buck Consultants and the General Assembly's actuary, Hartman & Associates, LLC, estimates the cost to be as follows:

	<u>2006-07</u>	<u>2007-08</u>	<u>2008-09</u>	<u>2009-10</u>	<u>2010-2011</u>

There are actuarial gains in the Fund in the amount of \$111,000 so an appropriation of \$514,000 is required.

**SPECIAL PROVISION: INCREASE THE MAXIMUM MONTHLY PENSION BENEFITS FOR RETIRED MEMBERS OF THE NORTH CAROLINA NATIONAL GUARD**

**ESTIMATED IMPACT ON STATE:** Both, Buck Consultants, the Retirement System's actuary, and Hartman & Associates, the General Assembly's actuary, agree that the cost will be as follows:

	<u>2006-07</u>	<u>2007-08</u>	<u>2008-09</u>	<u>2009-10</u>	<u>2010-2011</u>
<b>Benefit Increase</b>	<b>\$964,000</b>	<b>\$964,000</b>	<b>\$964,000</b>	<b>\$964,000</b>	<b>\$964,000</b>

There are no gains within the Fund so a General Fund appropriation in the above amounts will be required. The accrued liability would be liquidated in a nine-year period of time.

**ASSUMPTIONS AND METHODOLOGY:**

**Teachers' & State Employees' Retirement System**

The cost estimates of the System's Actuary are based on the employee data, actuarial assumptions and actuarial methods used to prepare the December 31, 2004 actuarial valuation of the fund. The data included 311,612 active members with an annual payroll of \$10.4 billion and 128,577 retired members in receipt of annual pensions totaling \$2.3 billion. Significant actuarial assumptions used

include (a) an investment return rate of 7.25%, (b) salary increase rate of 6.25%, (c) the George B. Buck Mortality Tables for deaths in service after retirement and (d) rates of separation from active service based on System experience. The actuarial cost method used was the entry age normal method with open-end unfunded accrued liability and a frozen unfunded liquidation period of nine years. Detailed information concerning these assumptions and methods is shown in the actuary's report, which is available upon request from Stanley Moore.

### **Consolidated Judicial Retirement System**

The cost estimates of the System's Actuary are based on the employee data, actuarial assumptions and actuarial methods used to prepare the December 31, 2004 actuarial valuation of the fund. The data included 490 active members with an annual payroll of \$49.4 million and 420 retired members in receipt of annual pensions totaling \$20.2 million. Significant actuarial assumptions used include (a) an investment return rate of 7.25%, (b) salary increase rate of 6.25%, (c) the 1979 George B. Buck Mortality Table for deaths after retirement, and (d) rates of separation from active service based on System experience. The actuarial cost method used to determine the liabilities is the projected benefit method; however, the method used to determine the contribution rate is the projected unit credit method with a frozen unfunded liquidation period of nine years. Detailed information concerning these assumptions and methods is shown in the actuary's report, which is available upon request from Stanley Moore.

### **Legislative Retirement System**

The cost estimates of the System's Actuary are based on the employee data, actuarial assumptions and actuarial methods used to prepare the December 31, 2004 actuarial valuation of the fund. The data included 169 active members with an annual payroll of \$3.7 million and 236 retired members in receipt of annual pensions totaling \$1.5 million. Significant actuarial assumptions used include (a) an investment return rate of 7.25%, (b) the 1971 Group Annuity Mortality Tables for deaths in service after retirement and (c) 100% vesting after five years of service with no assumptions for terminations other than death and disability. The actuarial cost method used was the projected unit credit cost method with service prorated. The actuarial liability is computed by using member service to date and attributing an equal benefit amount to each year of credited and expected future service. Detailed information concerning these assumptions and methods is shown in the actuary's report, which is available upon request from Stanley Moore.

### **Firemen and Rescue Squad Workers' Pension Fund**

The cost estimates of the System's Actuary are based on the employee data, actuarial assumptions and actuarial methods used to prepare the June 30, 2005 actuarial valuation of the fund. The data included 33,520 active members and 9,495 retired members in receipt of annual pensions totaling \$18.6 million. Significant actuarial assumptions used include (a) an investment return rate of 7.25%, (b) the 1974 George B. Buck Mortality Table for deaths after retirement and (c) rates of separation from active service based on Fund experience. The actuarial cost method used was the entry age method with open-end unfunded accrued liability and a frozen unfunded liquidation period of nine years. Detailed information concerning these assumptions and methods is shown in the actuary's report, which is available upon request from Stanley Moore.

**North Carolina National Guard Pension Fund**

The cost estimates of the Fund’s Actuary are based on the employee data, actuarial assumptions and actuarial methods used to prepare the December 31, 2004 actuarial valuation of the fund. The data included 8,005 active members, 6,924 former members entitled to deferred benefits and 2,461 retired members in receipt of annual pensions totaling \$2.3 million. Significant actuarial assumptions used include (a) an investment return rate of 7.25%, (b) the 1979 George B. Buck Mortality Table for deaths after retirement and (c) rates of separation from active service based on Fund experience. The actuarial cost method used was the entry age method with open-end unfunded accrued liability and a frozen unfunded liquidation period of nine years. Detailed information concerning these assumptions and methods is shown in the actuary’s report, which is available upon request from Stanley Moore.
